SUMMARY

- Data Analyst with MCA specialization and hands-on experience across end-to-end projects in Python, SQL, and Power BI. Demonstrated ability to question initial assumptions when data contradicts them — pivoted from RFM to cohort analysis after purchase frequency distribution revealed ~75% one-time buyers, directly informing a business strategy recommendation. Seeking a fresher DA role where analytical rigor matters as much as technical execution.

EDUCATION

University of Petroleum and Energy Studies (UPES)

Master of Computer Applications | CGPA: 7.5/10.0

T.D. College

Bachelor of Science — Physics, Mathematics

St. Patrick's School (CBSE)

Class XII: 76.0% | Class X: 8.2 CGPA

Dehradun, UK

2023 – 2025

Jaunpur, UP

2019 – 2022

Jaunpur, UP

2019 | 2017

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, Scikit-learn, XGBoost, Matplotlib, Seaborn), SQL

Data Analysis: Exploratory Data Analysis (EDA), Feature Engineering, Data Cleaning & Wrangling, Statistical Analysis, Hypothesis Testing, Correlation & Regression Analysis, Handling Missing Values & Outliers, SMOTE for Class Imbalance

Machine Learning: Supervised Learning (Linear Regression, Ridge, Lasso, Logistic Regression, Decision Trees, Random Forest, SVM, KNN, Naive Bayes), Ensemble Methods (AdaBoost, Bagging), XGBoost, Cross-Validation, GridSearchCV, Hyperparameter Tuning, Model Evaluation (Accuracy, Precision, Recall, F1-Score, R²)

Visualization: Power BI (Slicers, KPI Cards), Matplotlib, Seaborn

Database & Data Management: MySQL, DBMS Concepts, SQL Joins, Window Functions, Subqueries

Tools & Concepts: MS Excel (Pivot Tables, VLOOKUP, Conditional Formatting), Jupyter Notebook, GitHub, OOP in Python, File Handling

EXPERIENCE

Machine Learning Intern

Feb 2025 – May 2025

PHEME Software Pvt. Ltd. (IBM Platinum Business Partner)

Remote

- Applied SMOTE to resolve 73:27 class imbalance on MRI training data, improving model accuracy from ~70% to 92%
- Standardized images via resizing, normalization, and pixel scaling for consistent model input
- Identified and resolved pipeline integration issues to ensure successful end-to-end model execution

PROJECTS

Brazilian E-Commerce Analysis | Python, SQL, Power BI, Cohort Analysis

- 95,000+ records across 8 relational tables — SQL joins and aggregations powering a 4-page Power BI dashboard across product categories and geographic regions
- RFM segmentation abandoned after `pd.qcut` failure revealed ~75% one-time buyers, making frequency-based segmentation statistically invalid for this dataset
- ~5% second-purchase rate identified via cohort retention curve — recommended acquisition over retention as primary growth lever, backed by month-on-month drop to near-zero by month 2

Customer Churn Prediction | Python, Random Forest, SMOTE

- 84% accuracy, 78% F1 — Random Forest classifier optimized for Recall to minimize false negatives on 7,000+ telecom customer records
- SMOTE applied exclusively on training set to resolve 73:27 class imbalance, preventing data leakage
- High-risk customer segments identified and mapped to targeted retention strategy recommendations

House Price Prediction | Python, XGBoost, Scikit-learn, EDA

- R² 0.83 achieved with XGBoost across 20,000+ property records after benchmarking Linear Regression, Ridge, Lasso, and XGBoost
- GridSearchCV hyperparameter tuning implemented to reduce overfitting and improve generalization on unseen data
- Multicollinearity analysis, outlier treatment, and feature selection applied to isolate statistically significant price determinants

CERTIFICATIONS & INTERESTS

Certifications: SQL Intermediate (HackerRank), Power BI for Beginners

Technical Interests: Data Storytelling, Predictive Modeling, Business Intelligence
